
II-08 SOFTWARE QUALITY ASSURANCE**Purpose**

To require suppliers of automotive product related software, or automotive products with embedded software, to implement and maintain a process for software quality assurance for their products.

Supplier Responsibilities

A software development assessment methodology shall be utilized to assess the software development process. The supplier shall retain documented information of a software development capability self-assessment with priorities based on risk and potential impact to customers.

ADVICS Responsibilities

Confirm the supplier is conducting self-assessments and retaining documentation of the assessments.

Potential Tools

Automotive SPICE process assessment model can be obtained at www.automotivespice.com.
